Instructions

Step 1: Recommended to use your original choice from the Atari Case Study, but if it's just black and white a different retro game of your choice may be picked (preferably first-generation systems or older).

- For reference, here are the links from the prior assignment:

- https://www.free80sarcade.com/all2600games.php

Step 2: Analyze the color/design further and come up with a modernized sketch/outline/etc per the below tasks. I understand not everyone is an artist (neither am I) hence the goal of these are sketches, but you're free to be more elaborate.

Step 3: Save the worksheet. Export the PDF. Upload it to GitHub. Upload the PDF to Canvas.

Section #1: (2 pts.) Exploratory Analysis Of Original Game

Progress: 100%

Task #1 (0.67 pts.) - Color Schemes Identification

Progress: 100%

Details:
Include relevant screenshots of the game. You don't need to go crazy with this but do capture the essence.

The visual overview of Wabbit

Task #2 (0.67 pts.) - Analyze how these colors contribute to the game's atmosphere

Progress: 100%

Your Response:

The color presentation of Wabbit contributes to finalizing its identity of being a simple fantastical game about a farmer warding off rabbits from a carrot. As you can see upon first glance, 70% of the game's color is made up of different greens representing the farm terrain. The other 30% is composed of miscellaneous color choices that give the game genuine tangibility to what it's trying to communicate to the audience from the light blue and solid yellow resembling the outside atmosphere to the much darker greens/browns posing as the carrot patch and witnessing what's happening to it.

Task #3 (0.67 pts.) - Compare with a modern equivalent

Progress: 100%

Details:

- Mention the comparison game (can be more than one game)
- Compare the use of color to the modern game and highlight how color usage evolved (or devolved)

Your Response:

Farmville would be the modern equivalent to Wabbit and it shows how drastically things have evolved in terms of color usage when putting these games side by side. The Atari 2600 is only limited to a 128-bit color palette as well as an 8-bit CPU so developers way back then had to work under severe hardware limitations, restraining their artistic color choices when it came to designing games. Thus, why Wabbit looks as simple as it could possibly be. As time has evolved, Farmville doesn't have such

limitations and can display hundreds, if not thousands of colors on screen at once to create it's visually vibrant world the series is known for. Seeing minute details like the fruits and vegetables having secondary colors, the lighting emanating on materials that produce a different color than it's original color, and the terrain having different colored sediments on them helps Farmville establish more with it's color usage compared to several decades old Atari 2600 title Wabbit.

Section #2: (2 pts.) Creative Conceptualization For Redesign

Progress: 100%

Task #1 (1 pt.) - Modern Mood/Theme Proposal via Color

Progress: 100%

Details:

- Propose a revised mood or theme for the game, justified with a new color scheme
- Explain your choice of colors using color harmony rules (e.g., analogous, complementary)

Your Response:

To start off my Wabbit Revision Proposal, I'd like to reimagine it in a somber setting taking place at the dead of night with a split complementary color scheme mimicking that toneshift. This commentary for the outside atmosphere includes the moon being bright yellow, the sky being dark blue, and the house itself being purple which emulates that terrifying midnight feeling I'm trying to capture. Next, I'd suggest a regular complementary color harmony for the carrot patch to match the dystopian vibe I'm pining for with the patch and the earth surrounding it being various themes of orange in which gets complemented by an opposing light blue for the rabbit holes.

Task #2 (1 pt.) - Narrative Enhancement Through Color

Progress: 100%

Details:

- Explain how color can be used to enhance storytelling within the game (this may be a stretch in some cases, but answer it the best you can)
- Provide examples/descriptions that illustrate your narrative color choices

Your Response:

The specific color choices I chose for my revision perfectly illustrate the narrative brilliance behind each one as they contain a whole new different message compared to the original design itself. My agenda is to display a more dystopian tone for the game by picking color options that could make a player feel uneasy within the setting they're in. This revolves around plunging the sky into darkness with a bright yellow moon shining in the background. The rabbit holes are light blue representing holes filled with water and the terrain is made up of various different palettes of orange. This scene spells disastrous for Billie Sue to be dealing with a natural disaster that caused the rabbit holes to be filled with water and turning the ground orange in the dead of night.

Section #3: (2 pts.) Design Sketching And Color Application

Progress: 100%

Task #1 (1 pt.) - Gameplay Mechanics and Color Integration

Progress: 100%

Details:

- Sketch gameplay elements or mechanics enhanced by your new color scheme (excludes interface as it's a different question/task)
- Provide concept art that showcases the updated visual style
- If using physical sketches, can use a scanner or phone photo to capture. It's recommended to also add the original to github as this upload process may not do the original work(s) justice.

Task #2 (1 pt.) - Explain the choices of your sketches

Progress: 100%

Details:

- Describe how these color choices affect player interaction and engagement
- Explain the rationale behind each color choice and its expected impact

Your Response:

The color choices I made can affect the player's sense of surrounding and cause them to be more wary throughout their playthrough in the game. Starting with the atmosphere, I imagined the bright moonlight emanating from a yellow midnight moon surrounded by a gloomy dark blue sky with a purple house off towards the distance. Next, the ground has light blue rabbit holes filled with water the rabbits emerge from and the ground itself includes varying palettes of orange too. The composition on display makes for a bizarre alternate world where at the most vulnerable a human can get during the night, a flash flood has arisen which flooded the rabbit holes all the way to the brim and mysteriously turned the earth orange.

Section #4: (2 pts.) Audiovisual Reimagining And Ui/ux Modernization

Progress: 100%

Task #1 (0.67 pts.) - Complementary Sound Design

Progress: 100%

Details:

- Briefly outline how sound design complements the visual color scheme
- Mention if specific audio cues align with color changes or themes (use details)

Your Response:

The present sound design perfectly snugs itself with my updated vision of Wabbit. The harsh "boop" and "crash" sounds the game generates is reflective of the spooky decor I made. For instance, the noise when a rabbit pops out of their hole can be described in the same way as anything popping up a body of water would sound like. Likewise, the sound Billie Sue makes with her legs when traversing back and forth explains the level of urgency she would feel in this new setting.

Task #2 (0.67 pts.) - UI/UX Color Scheme

Progress: 100%

Details:

- Sketch UI/UX elements highlighting the integration of your new color scheme
- If using physical sketches, can use a scanner or phone photo to capture. It's recommended to also add the original to github as this upload process may not do the original work(s) justice.

Task #3 (0.67 pts.) - UI/UX Color Functionality

Progress: 100%

Details:
Detail how color enhances usability, player feedback, and overall aesthetic. Include considerations for accessibility.

Your Response:

Color is a fundamental and multi-functional design tool that helps to provide user guidance and building immersion. It enhances gameplay by communicating clarity to the surrounding atmosphere and can be used for a multitude of properties for accessibility purposes such as creating distinctive HUDs and UI options, highlighting visual hierarchy, and signaling moods of safety or danger in a given situation.

Section #5: (2 pts.) Reflection

Progress: 100%

Task #1 (1 pt.) - Reflection on Color Theory in Game Design

Task #1 (1 pt.) - Reflection on Color Theory in Game Design

Progress: 100%

Details:

- Reflect on how the application of color theory principles can transform the player experience
- Discuss challenges faced in applying color theory to a classic game

Your Response:

Color theory transmutates the player's sensibilities in ways for them to react accordingly to the design being presented in front of them. If a designer in charge of establishing those theories throughout the experience wants to evoke a specific emotion from the player, there's a likelihood they could succeed when using the correct color principles to elicit such an emotion reasonably as every color in of itself has a discrete story to tell. The challenges I've faced on applying a new color facelift to Wabbit was how I could change the colors to illustrate a brand new mood for players to inspire from and if I could possibly keep that within the realm of color harmony rules.

Task #2 (1 pt.) - Personal Learning Experience

Progress: 100%

Details:

- Share insights gained from this assignment, particularly in relation to color's impact on game aesthetics and mood
- Evaluate the effectiveness of your redesign choices based on color theory

Your Response:

The knowledge regarding color theory rules from this assignment has really widened my perspective on the topic as it underlines the grand importance of displaying crucial color choices to invent an entirely different composition for people to be inspired from. I set out to design a somber version of Wabbit to see if it could resonate fear, cautiousness, and urgency onto players willingly to give this take a try. I do believe the redesign's drastic departure from the original aesthetic will enforce a different attitude to players and have them approach the gameplay differently than what's expected before.
